The Effect of a Educational Curriculum on the Development of some Physical and Kineinatics Features and on Basic Skills for slow Learners

By: Tha'ar Resheed Hussen

Superviser: Dr. Nori A. Alshouk

The thesis consists of five chapters. Chapter one deals with the introduction and the importance of the study. It also tackled the phase of childhood as the most important phase. It focused on the slow learners so as to know the best ways to teach slow learners how to use their abilities and capabilities in all fields, The researcher dealt with problem of the study which was the absence of physical training programs for slow learners.

The Aims of the study were:

- 1- Recognizing some basic physical and motor abilities in motor performance for slow learning.
- 2- Making a training program for developing these abilities for slow learning.
- 3- Finding the effect of this educational program on the development of these abilities for slow learning.

The Hypothesis of the study were:

- 1- The program do affect the development of the basic skills and abilities in motor performance.
- 2- There are statistical differences between the pre and post tests given to slow learners.
- 3- There are statistical differences between the post tests belonging to both the experimental and controlling groups.

The Fields of the study:

- 1- Subjects: Slow learners whose age range from seven to nine years in the primary school of DIALA - center.
- 2-Time: From 10/12/2001 till 30/8/2002.
- 3- Place: The fields of the primary school.

Chapter Two was a review of literature as well as a full description of the proposed program and the basic skills that this program develops. It also gives a comprehensive idea about slow learners and their characteristics and the styles of teaching appropriate to their condition.

Chapter three dealt with the procedures. The researcher used the experimental program with pre and post tests. The subjects were twenty five pupils (girls / boys) they were all similar in (height, weight, age).

Chapter four included the results and their analysis and discussion. The discussion of the physical and motor abilities are based on scientific basics.

Chapter five deals with the conclusions and recommendations.

The conclusions were:

- 1- The educational program has a positive effect on the variable's development through the small games and variable motor activities that sharpen the slow learners.
- 2- Mixing slow - learners with their health counterparts in physical Education lesson leads to their feeling of non – efficacy as chance is not given to them to show their motor abilities.
- 3- Not taking various individual differences of slow – learners into account when preparing physical Education curricula, would lead pupils to have high and continuous psychological tension and worry.
- 4- The coordination eye-hand, eye – leg needs a high level of nervous cooperation and coordination.

Recommendation:

- 1- The Ministry of Education can include this educational program within the curriculum.
- 2- The importance of using small games that improve, muscular – nervous coordination during sport lesson.
- 3- Awareness among physical Education teachers of how to deal with slow learners confidently and properly and rendering proper care available to them would lead teachers to discover their innate characteristics and abilities and develop them.
- 4- Efficient educational capabilities should be available and able to consider the slow learner's specialty.

The effect of skillful exercises, using ball shooter , on growing the motor expectance and learning the defensive skills in volleyball for juniors

Researcher

Thaer Rasheed Hassan

Basic Education College

2014A.C

They say that volleyball is one of the group sport game which is featured by the variety of its skills and plans . It is also said that it needs the continuous motor expectance for the changing situations and the behavior of the colleagues , competitors and the tool. This is to make the playing of the game go on smoothly because of the quick rhymes that the game has. This is cannot be done only by the good learning of its skills , in addition to the availability of the qualitative assisting machines in the learning process , one of which is ball shooter for the viable speed and directions with different highs it and the availability of balls provides far away from the routine exercises.

The significance of the study lies in setting skillful exercise and implementing the ball shooter by the researcher to develop the motor expectance and learn the defensive skills to reach the right performance in order to achieve the main and important goal in the process of its learning.

While the problem of the study lies in the existence of clear weakness for the juniors in the variables of the motor expectance and the defensive skills when the motor situation needs from the player to receive serve ball or block the spike or defending the court , for its difference for a player to another according to the availability of the motor and physical abilities linked to the player himself. Thus the researcher sets skillful exercises and implementing the ball shooter to grow motor expectance to ensure learning the defensive skills and the accuracy of their performance .

The study aims at:

1. Setting skillful exercises to grow motor expectance and learn the defensive skills in volleyball for juniors.
2. Knowing the effect of skillful exercises using the ball shooter on growing the motor expectance and learning the defensive skills in volleyball for juniors.
3. Knowing the effect of skillful exercises without using the ball shooter on growing the motor expectance and learning the defensive skills in volleyball for juniors.
4. Distinguishing the priority of the two experimental groups, the first and the second, in the development of motor expectation and learn defensive skills Volleyball for juniors

In order to check the aims of the study, the researcher assumes the following:

1. There are significant differences with statistical references between the pretest and the posttest of the first experimental group using the ball shooter in growing the motor expectance and learning the defensive skills in volleyball for juniors.
2. There are significant differences with statistical references between the pretest and the posttest of the second experimental group without the ball shooter in growing the motor expectance and learning the defensive skills in volleyball for juniors.
3. There are significant differences with statistical references in the pretest for the two experimental groups in growing the motor expectance and learning the defensive skills in volleyball for juniors.

As for the theoretical studies , the researcher handles many topics related to the exercises, technology, volleyball game , assisting tools and machines , motor expectance , smooth , the amount of movement , the push of power , motor energy , motor accuracy, receiving skills, the block , and defending the court , in addition to the ex-studies of the research subject.

The following procedures are followed , by the researcher , in the study:

- The researcher uses the experimental method of the random chosen equal groups design with pretest and posttest.
- The study implemented on the juniors of the training center of the branch federation of volleyball for the sport year (2012-2013) . They are (24) juniors, divided into two groups (12)

juniors in each. After concordance , the first experimental group implemented the skillful exercises using the ball shooter while the second group implemented the skillful exercises without the ball shooter.

- The study requires making the artistic performance, accuracy of performance , and motor learning tests.
- After implementing the pretests the equality is made in all the variables of the study.
- the skillful exercises, in the learning units, were implemented from the 11th of Aug.2013 to the 4th of Nov. 2013m. The learning units are (48) unit for (12) weeks (4) units a week for each experimental group with (65) minutes specified for (the main part / the applying aspect) of the total time of the unit (120) minutes.
- The posttests are implemented after finishing the exercises.
- Having getting the data and treating them statistically then displaying , analyzing and discussing them.

Depending on the scientific resources , the researcher reached at conclusions , the most important of them are:

1. The skillful exercises have great effect in growing the motor expectance and learning the skills of receiving the serve , the block , and defending the court in volleyball for the juniors of the two experimental groups.
2. The ball shooter has great effect in growing the motor expectance and learning the skills of receiving the serve , the block , and defending the court in volleyball for the juniors of the first experimental group.
3. The ball shooter was a good assistant for the coach in the speed and the accuracy of directing the shot balls and it gives better opportunity to the coach to observe the players and correcting their errors positively.

The researcher recommends the following :

1. The necessity of using the skillful exercises set by the researcher in growing the motor expectance and learning the skills of receiving the serve, the block and defending the court in volleyball for the juniors.
2. Using the ball shooter in learning the skills of receiving the serve, the block and defending the court in volleyball for the juniors.
3. The necessity of depending on the tests set by the researcher as a measuring tool to know the accuracy of skillful performance of the player in the defensive skills , receiving the serve , the block and defending the court in volleyball for the juniors.
